

Project — Developer Brief

About the Project:

Building a storytelling platform blending beautiful UI, emotional storytelling, and audio content. Future phases may include AI voice integration and a hardware speaker device, but the current focus is purely on launching a smooth iOS MVP app.

Type of Role:

- **Part-Time, Project-Based** (focused on completing the MVP in 4–5 weeks maximum)
 - Potential to **convert into a full-time tech lead role** after MVP
 - **Prefer Bangalore-based candidates** (for future scaling ease)
 - Remote work acceptable with strong, fast execution
-

Developer Profile Required:

- **Generalist Developer:**
Must handle both frontend (iOS SwiftUI) and backend (Firebase) work.
 - **Minimum Experience:**
 - 1–2 years hands-on iOS app development (SwiftUI preferred)
 - At least 1 app built and deployed (even TestFlight or small apps acceptable)
 - Practical Firebase usage (Authentication, Firestore, Storage)
 - Bonus if familiar with AVFoundation for audio playback (optional for MVP)
 - Strong SwiftUI skills: capable of clean UI polish (layouts, backgrounds, friendly UX)
 - Proactive mindset to clean up and extend existing CursorAI-generated SwiftUI frontend
-

Scope of Work:

Frontend (iOS SwiftUI App):

- Review, fix and polish existing SwiftUI screens: Landing, Login, Sign Up, OTP, Child Profile Setup, Story Library, Story Detail, Audio Player, Dashboard, Profile
- Implement clean persistent bottom Tab Bar for navigation
- Fix navigation/state issues (especially login/signup flows)
- Light UX polish (background colors, padding, fonts - San Francisco Rounded)
- Implement online audio streaming playback (no offline download needed for MVP)

Backend (Firebase Setup):

- Setup Firebase Authentication (email/phone + OTP)
- Setup Firestore Database:
 - Users
 - Child profiles
 - Story library metadata
 - User story ratings
- Setup Firebase Storage for audio files
- Build simple backend API hooks for app integration

Analytics Features (MVP Level):

- Enable users to **rate stories (1–10 scale)**
- Save and retrieve user ratings
- Track most-played and top-rated stories inside Firestore
- Dashboard will eventually display listening history and rating insights (Phase 2)

Deployment:

- Setup Firebase Hosting if needed (optional for story metadata)
- Setup App Store Connect, TestFlight distribution
- Deploy MVP version to App Store

Important Notes:

- UI must strictly use Light Mode and San Francisco Rounded font
- Clean, scalable code organization mandatory
- Will receive handover of existing SwiftUI files, mockups, and references
- Some CursorAI-generated code needs refinement and expansion
- MVP completion expected within **4–5 weeks maximum** (non-negotiable)

Ideal Candidate Soft Skills:

- Communicates proactively
- Problem-solver, not excuse-maker
- Can think "founder-first" (move fast, smart fixes) and "developer-second" (write clean, future-proof code)

- Interested in creative consumer apps, not just corporate projects
-

Summary:

Looking for a motivated iOS (SwiftUI) + Firebase generalist developer to help complete the MVP quickly and cleanly, with the opportunity to grow into a tech leadership role later.
