

Python Learning Guide: @darshan.hustles

Why Learn Python?

Coming from a **PCMB background**, I had no prior coding experience, but I structured my learning in a way that helped me gain confidence and clear coding tests. Here's the exact roadmap I followed:

Step 1: Start with a Beginner-Friendly Crash Course

Before diving deep, it's important to get familiar with Python syntax and basic concepts.

Watch this YouTube Crash Course:

[CodeWithMosh - 6-Hour Python Course](#)

This is a great way to **grasp the basics quickly** in just 6 hours.

Step 2: Follow a Structured Course

Once you're comfortable with the basics, the best way to **practice and master Python** is by following a structured course.

Course: 100 Days of Code – Python by Angela Yu (Udemy)

This course teaches Python step by step with projects and hands-on practice.

What you'll learn:

- ✓ Python Fundamentals
 - ✓ Object-Oriented Programming (OOP)
 - ✓ Web Development (Flask)
 - ✓ Data Science Basics
 - ✓ Automation
-

Step 3: Practice Coding Problems

After learning Python concepts, **solving coding problems** is the key to building confidence.

Leetcode Practice Roadmap:

1. Start with **easy problems** to understand problem-solving approaches.

2. Solve **patterns-based questions** (arrays, strings, loops).

3. Move to **medium-level** problems once confident.

Recommended Topics to Cover:

- ✓ Arrays & Strings
 - ✓ Recursion & Backtracking
 - ✓ Sorting & Searching
 - ✓ Dynamic Programming
-

Step 4: Work on Projects

Projects help in **applying what you learned** and building a portfolio. Here are some beginner-friendly project ideas:

Simple Python Projects:

- ◆ **To-Do List App** – Create a simple task manager using Python and Tkinter.
- ◆ **Weather App** – Fetch real-time weather data using an API.
- ◆ **Expense Tracker** – Track daily expenses and store data in a CSV file.
- ◆ **Password Generator** – Generate strong passwords using Python.

Intermediate Python Projects:

- ◆ **URL Shortener** – Build a Bit.ly-like URL shortener using Flask.
 - ◆ **Web Scraper** – Extract data from websites using BeautifulSoup.
-

Step 5: Additional Learning Resources

Important YouTube Channel:

[Python Course in Engineering in Kannada](#) – If you prefer learning in Kannada, this channel explains concepts clearly.

Documentation & References:

[W3Schools Python](#)

Final Tips for Python Learners

Focus on consistency – Even 1 hour a day makes a huge difference.

Practice coding problems – The more you solve, the better you get.

Build real projects – Projects showcase your skills in interviews.

Read code written by others – Helps in improving logic and understanding best practices.
