

MODEL QUESTION PAPER : 2024-25

Course Code: BCSS602

MODEL QUESTION PAPER : 2024-25

Course Code: BCSS602

VIDYAVARDHAKA COLLEGE OF ENGINEERING

Autonomous Institute, Affiliated to Visvesvaraya Technological University, Belagavi
Gokulam, 3rd Stage, Mysuru 570 002

Sixth Semester B.E. Examinations

COURSE NAME: SYSTEM SOFTWARE AND COMPILER DESIGN

Duration: 3 hours

Max. Marks: 100

INSTRUCTION TO STUDENTS

- 1) Answer One Full question from each module.
- 2) Three module questions are compulsory and remaining two modules will have internal choice.
- 3) Each module carries 20 marks.

Q. No.	Module-I	Marks	BL	CO/PO																								
1.(a)	Explain the different phases of compiler and describe the translation of the statement “Position = initial + rate *6 ” at each phase.	10	L2	CO1/PO1																								
1.(b)	Construct the transition diagram for recognizing lexemes matching the token RELOP along with a sketch of implementation for the same.	10	L3	CO2/PO1																								
Module-II																												
2.(a)	Construct first and follow set for the given grammar. Also, generate the predictive parser table for the same. $E \Rightarrow TE'$ $E' \Rightarrow +TE' \mid \epsilon$ $T \Rightarrow FT'$ $T' \Rightarrow *FT' \mid \epsilon$ $F \Rightarrow (E) \mid id$	10	L3	CO2/PO1																								
2.(b)	Verify whether the given grammars are suitable for non-recursive predictive parsing. If not, state the reasons and make the grammars suitable for top-down parsing. i) $S \Rightarrow OS1 \mid O1$ ii) $S \Rightarrow SS+ \mid SS^* \mid a$	10	L4	CO3/PO2																								
(OR)																												
3.(a)	<table border="1"><thead><tr><th>Terminal/Input</th><th>num</th><th>(</th><th>+</th><th>)</th><th>\$</th></tr></thead><tbody><tr><td>S</td><td>$S \Rightarrow ES'$</td><td>$S \Rightarrow ES'$</td><td></td><td></td><td></td></tr><tr><td>S'</td><td></td><td></td><td>$S' \Rightarrow +S$</td><td>$S' \Rightarrow \epsilon$</td><td>$S' \Rightarrow \epsilon$</td></tr><tr><td>E</td><td>$E \Rightarrow num$</td><td>$E \Rightarrow (S)$</td><td></td><td></td><td></td></tr></tbody></table> Using the above parse table, parse the following strings i) num + num ii) num + (num+num)	Terminal/Input	num	(	+	)	\$	S	$S \Rightarrow ES'$	$S \Rightarrow ES'$				S'			$S' \Rightarrow +S$	$S' \Rightarrow \epsilon$	$S' \Rightarrow \epsilon$	E	$E \Rightarrow num$	$E \Rightarrow (S)$				10	L3	CO2/PO1
Terminal/Input	num	(	+	)	\$																							
S	$S \Rightarrow ES'$	$S \Rightarrow ES'$																										
S'			$S' \Rightarrow +S$	$S' \Rightarrow \epsilon$	$S' \Rightarrow \epsilon$																							
E	$E \Rightarrow num$	$E \Rightarrow (S)$																										
3.(b)	Verify whether any conflicts arise during parsing the string (a,(a,a)) in SR parser for the below grammar.	10	L4	CO3/PO2																								

MODEL QUESTION PAPER : 2024-25

Course Code: BCSS602

	$S \rightarrow (L) \mid a$ $L \rightarrow L, S \mid S$																		
Module-III																			
4.(a)	Explain three-address code with an example.	5	L2	CO1/PO1															
4.(b)	Construct LR(0) automaton for the given grammar $E \rightarrow E+T \mid T$ $T \rightarrow T * F \mid F$ $F \rightarrow id$	10	L3	CO2/PO1															
4.(c)	For the given syntax directed definition (SDD) as shown in Table 1, verify the dependency between the variables in the expression $3 * 5 + 4$ using S-attributed SDT and construct topological ordering. Table 1. Syntax Directed Definition	5	L4	CO3/PO2															
	<table><thead><tr><th>PRODUCTION</th><th>SEMANTIC RULES</th></tr></thead><tbody><tr><td>1) $L \rightarrow E \text{ n}$</td><td>$L.val = E.val$</td></tr><tr><td>2) $E \rightarrow E_1 + T$</td><td>$E.val = E_1.val + T.val$</td></tr><tr><td>3) $E \rightarrow T$</td><td>$E.val = T.val$</td></tr><tr><td>4) $T \rightarrow T_1 * F$</td><td>$T.val = T_1.val \times F.val$</td></tr><tr><td>5) $T \rightarrow F$</td><td>$T.val = F.val$</td></tr><tr><td>6) $F \rightarrow (E)$</td><td>$F.val = E.val$</td></tr><tr><td>7) $F \rightarrow digit$</td><td>$F.val = digit.lexval$</td></tr></tbody></table>	PRODUCTION	SEMANTIC RULES	1) $L \rightarrow E \text{ n}$	$L.val = E.val$	2) $E \rightarrow E_1 + T$	$E.val = E_1.val + T.val$	3) $E \rightarrow T$	$E.val = T.val$	4) $T \rightarrow T_1 * F$	$T.val = T_1.val \times F.val$	5) $T \rightarrow F$	$T.val = F.val$	6) $F \rightarrow (E)$	$F.val = E.val$	7) $F \rightarrow digit$	$F.val = digit.lexval$		
PRODUCTION	SEMANTIC RULES																		
1) $L \rightarrow E \text{ n}$	$L.val = E.val$																		
2) $E \rightarrow E_1 + T$	$E.val = E_1.val + T.val$																		
3) $E \rightarrow T$	$E.val = T.val$																		
4) $T \rightarrow T_1 * F$	$T.val = T_1.val \times F.val$																		
5) $T \rightarrow F$	$T.val = F.val$																		
6) $F \rightarrow (E)$	$F.val = E.val$																		
7) $F \rightarrow digit$	$F.val = digit.lexval$																		
(OR)																			
5.(a)	Explain syntax directed definition (SDD) with an example.	5	L2	CO1/PO1															
5.(b)	Construct goto and action table for the given LR (0) automaton as shown in Figure 1. Also, parse the string $id * id + id$.	10	L3	CO2/PO1															
The diagram shows the LR(0) automaton for the grammar. It consists of 12 states (I_0 to I_11) and transitions on grammar symbols (+, *, id, (,), E, T, F). Each state contains LR(0) items and their transitions. I_0: $E' \rightarrow \cdot E$, $E \rightarrow \cdot E + T$, $E \rightarrow \cdot T$, $T \rightarrow \cdot T * F$, $T \rightarrow \cdot F$, $F \rightarrow \cdot (E)$, $F \rightarrow \cdot id$. Transitions: E to I_1, T to I_2, id to I_5, (to I_4, F to I_3. I_1: $E' \rightarrow E \cdot$, $E \rightarrow E \cdot + T$. Transitions: + to I_6, accept. I_2: $E \rightarrow E \cdot T$, $T \rightarrow T \cdot * F$. Transitions: T to I_7, * to I_7. I_3: $T \rightarrow T \cdot F$. Transitions: F to I_8. I_4: $F \rightarrow (\cdot E)$, $E \rightarrow (\cdot E + T$, $E \rightarrow (\cdot T$, $T \rightarrow (\cdot T * F$, $T \rightarrow (\cdot F$, $F \rightarrow (\cdot (E)$, $F \rightarrow (\cdot id$. Transitions: E to I_1, T to I_2, id to I_5, (to I_4, F to I_3. I_5: $F \rightarrow id \cdot$. Transitions: id to I_5. I_6: $E \rightarrow E + \cdot T$, $T \rightarrow T * \cdot F$, $F \rightarrow (E \cdot$, $F \rightarrow id \cdot$. Transitions: T to I_9, F to I_8, id to I_5. I_7: $T \rightarrow T * \cdot F$, $F \rightarrow (E \cdot$, $F \rightarrow id \cdot$. Transitions: F to I_8, id to I_5. I_8: $E \rightarrow E + T \cdot$, $F \rightarrow (E) \cdot$. Transitions: (to I_4, F to I_3. I_9: $E \rightarrow E + T \cdot$, $T \rightarrow T * F \cdot$. Transitions: T to I_7, F to I_8. I_10: $T \rightarrow T * F \cdot$. Transitions: F to I_8. I_11: $F \rightarrow (E) \cdot$. Transitions: F to I_8.																			

MODEL QUESTION PAPER : 2024-25

Course Code: BCSS602

	Figure 1. LR(0) automaton																																													
5.(c)	Verify the given expression using Direct Acyclic Graph (DAG) and construct three address code. a = b * - c + b * - c	5	L4	CO3/PO2																																										
Module-IV																																														
6.(a)	Explain the issues in the design of a code generator.	5	L2	CO1/PO1																																										
6.(b)	Describe the machine architecture features of SIC assembler.	5	L2	CO1/PO1																																										
6.(c)	Generate assembly code for the below three address code using three registers R1, R2 & R3 t = a – b u = a – c v = t + u a = d d = v + u	10	L3	CO2/PO1																																										
Module- V																																														
7.(a)	Explain program relocation using Bit Mask.	5	L2	CO1/PO1																																										
7.(b)	Generate the object program for the following SIC/XE program.
